Subject: Dinking Water Program - Hot site update Jan 18

News as of this afternoon 1/18/14

· The West Virginia American Water Company is reporting that drinking water restrictions have been lifted in all pressure zones with some exceptions. Precautionary boil water advisories are in place for several smaller groups of customers throughout the district after water storage tanks were depleted following excessive flushing activities.

· Additionally the West Virginia American Water Company has not lifted the alert for three towns (Buffalo, Frazier's Bottom and Pliny). Water sampling results

indicated additional flushing and sampling is required in this area.

· The West Virginia American Water Company also reported that once the system is fully restored, they will test the system at the parts per billion level to ensure non-detectable levels in the water.

· ORSANCO continues to monitor the plume. Dilution from tributaries to the Ohio are contributing to low concentrations of MCHM. Louisville Ky Zorn intake peaked at 3.5 ppb.
